| C Carry from ALU           | EOR Logical Exclusive or                  | EA Effective Address:w         |

**Notes:**

1. This column gives a base cycle and byte count. To obtain total count, add the values obtained from the INDEXED ADDRESSING MODE table, in Appendix F.
2. R1 and R2 may be any pair of 8 bit or any pair of 16 bit registers.  
The 8 bit registers are: A, B, CC, DP  
The 16 bit registers are: X, Y, U, S, D, PC
3. EA is the effective address.
4. The PSH and PUL instructions require 5 cycles plus 1 cycle for each byte pushed or pulled.
5. 5(6) means: 5 cycles if branch not taken, 6 cycles if taken (Branch instructions).
6. SWI sets I and F bits. SW12 and SW13 do not affect I and F.
7. Conditions Codes set as a direct result of the instruction.
8. Value of half carry flag is undefined.
9. Special Case Carry set if b7 is SET.
